

Project Information

Why is the work needed?

For nearly two decades, Dakota County and the City of Lakeville have been planning for an East-to-West roadway that would help accommodate an area wide system and travel network. Dakota County and the City of Lakeville are partnering to coordinate planning efforts and identify improvements on two roadway segments in the City of Lakeville – County Road 9 (Dodd Boulevard) and 179th Street. This project will provide users with a more safe and reliable roadway that can better serve the region in the future.

What is happening?

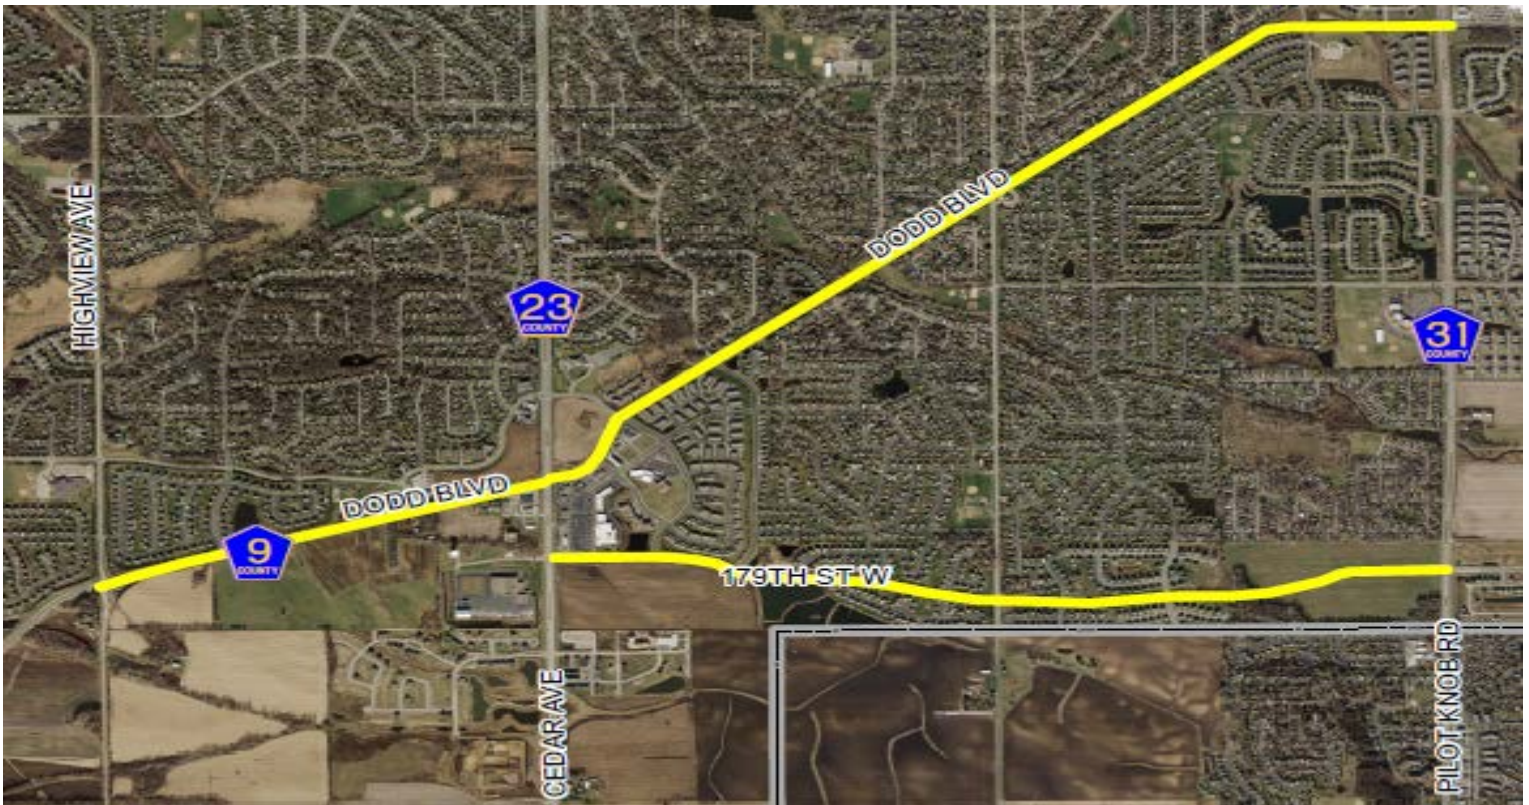

The scope of work includes preliminary feasibility study and analysis of intersection and roadway improvements, preliminary engineering designs, surveying and cost estimates to better inform Dakota County and the City of Lakeville on what the two segments need to be upgraded to meet future traffic demands.

What is next?

The project team is in the initial data gathering phase which includes collecting traffic data, gathering environmental information in the area and completing initial mapping efforts of the two corridors.

The team will also hold an Open House on March 12th where staff will be available to introduce the project and answer any questions. More details coming soon!
